COVID DEEP **CLEAN**

*Organic cleaning for a safer and
healthier work environment.*

THE INVISIBLE THREAT IN YOUR WORKPLACE

The COVID-19 outbreak has brought into stark focus the lack of cleaning protocols to specifically address air quality in work environments in Australia.

No business wants to put their employees or customers at risk - especially at this sensitive time with the outbreak still top of mind and many organisations fighting for their existence.

This is not simply about cleaning. It is about hygiene and adopting new procedures to protect the people most important to your business, i.e., your staff and customers.

Did you know that...

The Coronavirus is thought to exist on surfaces for anything from a few hours to a few days but can also be airborne for up to eight hours?

Poor indoor air quality is listed as one of the top five environmental threats to public health by the EPA in the United States?

So, how do we create commercial environments that limit the spread of pathogens and remain safe and healthy?

Engineer
spaces to improve
air quality.

Improve
the health of the
environment.

Limit
the spread of
pathogens.

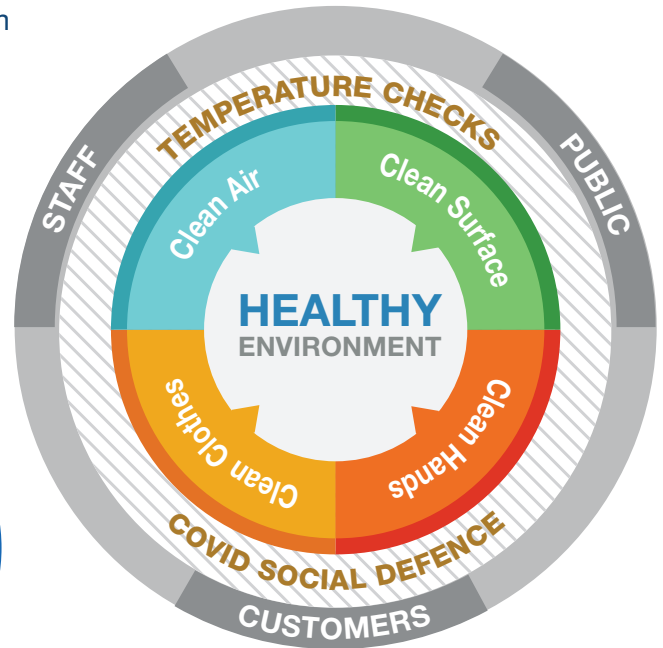

COVID DEEP CLEAN:

Clean surfaces, clean air, clean clothing & clean hands

Since the start of the COVID-19 outbreak, the Ozland team has been working with our US partners to introduce what we believe is the most complete deep clean available for Australian commercial buildings.

The COVID DEEP CLEAN is designed not only to keep your employees and customers protected during this outbreak but to maintain a healthier, pathogen-free environment long into the future.

We do this using leading US-based products that are approved by the FDA, 100% organic, and completely free of the toxicity of commonly used cleaning products in Australia.

The key focus is on:

- ✦ **CLEAN SURFACES** – creating a long-term biostatic layer of protection for all surfaces using hospital-grade cleaners that eliminate pathogens.
- ✦ **CLEAN CLOTHING** – adding an extra layer of protection for employees in close contact with the aged or infirm with antimicrobial clothing using our laundry protection.
- ✦ **CLEAN AIR** - protecting the air from known pathogens with the latest air filters using submicron filtration from 0.1 microns and higher.

We also want to protect your people from spreading viruses and bacterial infections to others:

- ✦ **HAND SANITIZING** – we provide safe, non-flammable, long-lasting, water-based hand sanitizers that do not dry the skin.
- ✦ **HUMAN BODY TEMPERATURE CHECKS** - we can automatically identify visitors or staff members with elevated temperatures at your facility and notify your people before disease spreads.

Remaining healthy into the future

Mops, buckets, cloths, and vacs no longer cover what's needed to protect us from COVID-19.

To deal with the airborne threat of pathogens and ongoing air quality, you need a solution that goes deeper and lasts longer.

A COVID DEEP CLEAN is performed with:

- 👉 Ozland cleaners wearing full protective suits
- 👉 The use of dry fogging machines to achieve maximum coverage with a fine mist
- 👉 Industry-leading products approved by the FDA in the US and certified to eliminate coronavirus
- 👉 No bleach: only 100% organic, botanical, antimicrobial disinfectants
- 👉 Sub -micron filtration that removes pathogens from the air
- 👉 Products with ongoing residual protection 24/7 well after we leave

The use of 100% organic disinfectants and professional cleaning protocols ensures that your building remains pathogen free and safe into the future.

We'll even educate your people on what they can do to maintain a Healthy Environment for everyone. As well as our COVID Deep Clean, this involves good personal hygiene (clean hands) as well clean clothing (COVID Clothing Defence) and temperature checking staff and visitors (COVID Social Defence). In fact, future cleaning costs will be significantly lowered due to reduced frequency and elimination of harsh chemicals.

Is our COVID DEEP CLEAN right for you?

Every business wants to protect its employees and customers - whether you stayed open during COVID-19 or are preparing to open again after the outbreak.

The COVID DEEP CLEAN is specifically designed for business premises with:

A high throughput of customers

A high duty of care to the public

A high-risk of spreading disease

SHOPPING/RETAIL CENTRES

Public confidence is low. When retail centres open again, it will be critical to demonstrate safe and sanitary conditions in order to attract shoppers back.

Additionally, we can manage mass temperature screening using airport-style scanners or handheld devices to make people feel safer as they return to large retail environments.

HOSPITALS & AGED CARE FACILITIES

COVID-19 has highlighted how vulnerable elderly people are.

Employees in close contact with the elderly or infirm require the most sanitary and hygienic environment possible to help prevent the spread of disease. This should include special antimicrobial treatment for clothing and furnishings.

GOVERNMENT AGENCIES

Government buildings often contain large numbers of people in close proximity.

A COVID DEEP CLEAN can help you bring peace of mind to employees and members of the public who are entering offices and interacting with staff.

CONSTRUCTION

Ensure an infection-free work site from day one.

One infected worker can cause huge delays on a project as the entire team may have to self-isolate at home. By protecting your workers from the Coronavirus and other potential pathogens, you ensure that your people can stay on the job and avoid costly delays.

Who are we?

The recent COVID-19 crisis has highlighted the need for leaders in many sectors.

When it comes to commercial cleaning, the Ozland team is committed to leading the way in Australia.

All professional cleaners are carefully screened and vetted and, by partnering with leaders in the cleaning industry in the US, we are introducing the latest natural cleaning protocols to Australian businesses.

The COVID DEEP CLEAN is the latest addition to a range of holistic cleaning services aimed at healthier work environments for:

- ▶ Construction sites
- ▶ Shopping malls
- ▶ Government buildings
- ▶ Healthcare centres
- ▶ Aged Care and Child Care
- ▶ Schools
- ▶ Public Transport
- ▶ Offices
- ▶ Commercial buildings
- ▶ Strata buildings
- ▶ Industrial buildings
- ▶ Showrooms

Jerry Bond

Founder of PreVasive USA,
B.S. Biology, Masters EnvSci, IH, OH

"Our industry-leading organic cleaning products have been developed over the past decade and are used widely in many industries across the U.S. We're now excited to be partnering with Ozland to introduce them to Australian workplaces and helping to create healthier environments for all."

It's brand new to Australia but it's helping these U.S. organizations stay safe:

Become a recognised LEADER in hygienic work environments

While there is still a lot to learn about COVID 19 we all agree that it's a huge threat.

However, with a strong Coronavirus workplace response and the introduction of our Covid Deep Clean, you can make your premises a safer place.*

Make work even safer than home

Demonstrate that you take your people's safety seriously and take every step possible to create an environment that is even safer than home with special organic cleaning protocols and regular testing.

Be a leading light in your sector

Which of your competitors can hold their hands up and say that they protect their environment with a world-leading cleaning service that uses only organic products?

Protect your business

By protecting staff and customers, you also protect your business: your employer obligations include "a duty to provide and maintain a working environment...that is safe and without risks to the health of employees."

* At Ozland Group Solutions we recognise that there is still a lot to learn about COVID-19. This brochure has been produced in good faith using the latest understanding of the virus from reputable organisations and the knowledge acquired by our US partners in developing products and protocols designed to eliminate pathogens and poisons from our world for over 10 years. We acknowledge that this information is changing daily and that we have not been able to include all known reputable sources. Therefore, we cannot guarantee that the solutions that we present in this document will eliminate COVID-19 completely or prevent it from resurfacing in your work environment. Our products are certified as effective against coronavirus and presently being tested on COVID-19 with results expected shortly.
